DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2,4 & 5 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 10325398 A. The Japanese patent application discloses an axial flow fan comprising: a plurality of blades (103), a hub (2), a shaft (105), and electric motor (140), a circular front opening (3) with equal intervals in the circumferential direction of the outer periphery, a turbulent swirl generated in front of the hub from the central opening is eliminated and further slots are shown at a portion where the hub and blade connects and thereby having a reduced area (see drawings).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 6,9 & 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over by JP 10325398 A in view of Jung et al.(US Patent No. 6,584,799). The Japanese Patent discloses the claimed invention as stated above but lack a blowing fan situated at a rear of a refrigerator. Jung teaches a blowing fan situated at a rear of a freezer

compartment of a refrigerator. It would have been obvious to one of ordinary skill in the art at the time the invention was made to included the disclosed blowing fan of the Japanese Patent Application at a rear of refrigerator as taught by Jung for equally distributing air flow within a refrigerator compartment with reduce noise and more efficient operation.

Allowable Subject Matter

Claims 3,7 & 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
